Answer:

1. Is JAVA a Pass by Value or a Pass by Reference programming language?

Java is a passed by value programming language.

2. After the call of `swap(jungleDVD, cinderellaDVD)` why does the title of these two objects still remain?

After calling `swap(jungleDVD, cinderellaDVD)`, the titles remain unchanged because the method only swaps the title field values, not the object references.

The `jungleDVD` and `cinderellaDVD` references still point to the same objects, so the objects themselves remain the same, with only their title fields swapped.

3. After the call of `changeTitle(jungleDVD, cinderellaDVD.getTitle())` why is the title of the `JungleDVD` changed?

The title of `jungleDVD` changes because `changeTitle()` directly modifies its `title` field using the value from `cinderellaDVD.getTitle()`.

4. Write a toString() method for the DigitalVideoDisc class. What should be the return type of this method?

The return type should be String.
